Information Communication Technology

There are a wide range of ICT resources available, including dedicated computer suites as well as classroom sets of tablets and laptops. Additionally there are interactive whiteboards and many other peripherals such as cameras and scanners. Software available includes Microsoft Office and Adobe Creative Suite, as well as a range of subject specific programs and applications. Students are encouraged to use Internet resources to help learn and understand topics and concepts, and the design of the school network, and staff supervision, means students are able to do this in a safe environment.

Students are encouraged to be proficient users of ICT, as it can help connect them in many aspects of their school life as well as the wider community. We also recognise the importance of students being responsible users of ICT across all curriculum areas and time is taken to ensure students have the knowledge and understanding necessary to engage effectively.
